

SCC FOR HEALTHCARE

MANAGING HYBRID WORKLOADS

Hybrid Workloads

Increasing collaboration between healthcare organisations and partners, as well as the implementation of shared services, can help organisations to streamline clinical workflows to deliver an enhanced patient experience, within budget restraints.

As healthcare organisations hold an ever-growing repository of patient information and confidential medical data, they are continually challenged with how to keep patient data secure, while complying with increased regulation and General Data Protection Regulation compliance.

INTRODUCING HYBRID CLOUD

Hybrid cloud describes an integrated blend of on-premise private cloud and third-party public cloud services, with orchestration between the two platforms. By allowing workloads to move between private and public clouds as computing needs and costs change, hybrid cloud gives organisations greater flexibility and more data deployment options.

Using a hybrid cloud model allows Healthcare organisations to scale computing resources and eliminates the need to make large capital investments to handle short-term spikes in demand, providing a flexible commercial mechanism. Organisations will only pay for the resources they use instead of having to purchase, program, and maintain additional resources and equipment that could remain idle over long periods of time. Hybrid cloud computing is a 'best of all possible worlds' platform, delivering all of the benefits of cloud computing such as flexibility, scalability, and cost efficiencies with the lowest possible risk of data exposure.

Without the need to purchase and install infrastructure, Healthcare organisations can deploy applications in a matter of days or weeks and add capacity in minutes. An operating expenditure (OPEX) model can be very attractive as it allows for greater forward planning and transparency on IT expenditure.

SCC Universal Cloud Services (UCS) allows Healthcare organisations to consume cloud services on a pay-as-you-go model, selecting services from a variety of cloud providers to best suit workload requirements. UCS is available as a managed service, allowing cloud consumption from multiple providers, with visibility through one management platform and one consolidated monthly bill.

Why Partner with SCC?

By partnering with us, we can help Healthcare organisations to co-locate workloads that are not yet cloud ready as well as workloads that will never be viable for migrating to cloud. This enables them to have a true hybrid cloud approach, utilising on-premise, co-location, and other cloud offerings, such as:

- On-premise platforms, co-location, and hybrid
- Private Cloud (Cloud+)
- SCC Sentinel (*securing data to official/sensitive security standards*)
- Public Cloud
- Multi-Cloud.

Working alongside Healthcare organisations, SCC provides consultancy services based upon our extensive public sector experience, advising on which workloads are best suited to a cloud environment to help deploy the optimum model for applications, security requirements, and budget.

KEY FEATURES

SCC provides expert advice on what cloud solution would best fit each organisation. Our Cloud-accredited experts and professional services can provide support with:

- Licensing options
- Migration
- Integration services
- Training
- Security and governance.

KEY BENEFITS

Cloud removes contract lock-ins and provides a host of other benefits including:

- Increased flexibility/scalability
- Disaster recovery made simple
- Automated software and security updates
- Cash-flow friendly OPEX model
- Reduced environmental impact
- Shift from systems to services
- Increased collaboration, speed of change/innovation, service availability
- Internal IT can focus on more strategic projects
- Underpins other transformation programmes
- Governance and compliance.
