

# SCC FOR POLICE

## MANAGING HYBRID WORKLOADS

### Hybrid Cloud

**To deliver value to citizens and meet the ongoing increase in expectations, the Police Service needs to look for new ways of working to increase operational efficiency, deliver better services and reduce costs.**

**Police forces must strive to deliver digital transformation and integrated services with other agencies. Creating systems of engagement that provide citizen choice, ease of use and access, along with the simplification of processes is key for transformation.**

#### HYBRID CLOUD

Hybrid cloud is an integrated blend of on-premise private cloud and third-party public cloud services with orchestration between the platforms. By allowing workloads to move between private and public clouds as computing needs and costs change, hybrid cloud gives organisations greater flexibility and more data deployment options.

Using a hybrid cloud model allows police authorities to scale computing resources and eliminates the need to make large capital investments to handle short-term spikes in demand, providing a flexible commercial mechanism. Organisations will only pay for the resources they use instead of having to purchase, programme and maintain additional resources and equipment that could remain idle for some time. Hybrid cloud computing is a 'best of all possible worlds' platform, delivering all the benefits of cloud computing such as flexibility, scalability and cost efficiencies with the lowest possible risk of data exposure.

Without the need to purchase and install infrastructure, the Police Service can often deploy applications in a matter of days or weeks and add capacity in minutes. An operating expenditure (OPEX) model can be very attractive as it allows for greater forward planning and transparency on IT expenditure.

SCC Universal Cloud Services (UCS) allows the Police Service to consume cloud services on a pay-as-you-go model, selecting services from a variety of cloud providers to best suit workload requirements. UCS is available as a managed service, allowing cloud consumption from multiple providers, with visibility through one management platform and one consolidated monthly bill.

#### Why partner with SCC?

By partnering with us, we can help you co-locate workloads that are not yet cloud ready as well as workloads that will never be viable for migrating to cloud, enabling a true hybrid cloud approach, utilising on-premise, co-location and other cloud offerings, such as:

- On-premise platforms, co-location and hybrid
- Private Cloud (Cloud+)
- SCC Sentinel (*securing data to official/sensitive security standards*)
- Public Cloud
- Multi-Cloud.

Working alongside the Police Service, SCC provide consultancy services based upon our extensive public sector experience, advising on which workloads are best suited to a cloud environment to help deploy the optimum model for applications, security requirements and budget.

#### KEY FEATURES

**SCC provide expert advice on which cloud solution will best fit your organisation. Our Cloud accredited experts and professional services can provide support with:**

- Licensing options
- Migration
- Integration services
- Training
- Security and governance

#### KEY BENEFITS

**Cloud removes contract lock-ins and provides a host of other benefits including:**

- Increased flexibility/scalability
- Disaster recovery made simple
- Automated software and security updates
- Cash-flow friendly OPEX model
- Reduced environmental impact
- Shift from systems to services
- Increased collaboration, increased speed of change/innovation, increased service availability
- Internal IT can focus on more strategic projects
- Underpins other transformation programmes
- Governance and compliance.

With hybrid cloud solutions, SCC have the experience and knowledge to tailor any service to suit the needs of your police force as you work towards your own specific digital transformation.
